PROJECT

Rift Raft

TECHNOLOGY INTEGRATOR

La Scala

This property earned its name because of a massive rift that tore through roof of the original home on the same land that was built in 1925. The architect on the job originally called this home “The Rift House,” but La Scala Integrated Media put a positive spin on the name, and dubbed it “The Rift Raft.” Reason being, is that they felt their integrated home system would enable the house to “float.” The nickname became even more appropriate after the homeowners admitted that they felt like they were “drowning in technology” in their previous home. This time, their directions were clear: “Here is a box, make it beautiful, make it energy efficient, and keep interaction to a minimum.”

The core aesthetic of the home design was to be a clean shell — a neutral concrete palate that feels private when drawn and entertaining when opened. To accomplish the energy efficiency mandate, La Scala placed flush occupancy sensors around the home that are set up to trigger lighting pathways and a vacancy mode for lighting and media shut down. On the simplicity side, the Echo Flex enabled voice control and Crestron TSW-770 series panels make it easy to access audio zones or get the game on the big screen. The Crestron Home interface for iOS is also an operational match to the in-house touch panels.

CEDIA’s judges touted the “nice, simple energy management solutions” and called it a “job well done.”
