TECHNOLOGY INTEGRATOR

La Scala

La Scala Integrated Media faced a unique client in this 93-year-old homeowner whose request was simply: “help me, I’m 93.” While some homeowners seek to control every detail of their home, this client was not looking for that level of granularity; she just wanted to get out the door to bridge club faster. The aesthetic of the home was also meant to have a clean and beautiful aesthetic, so product installation had to be particularly precise. The objective for this penthouse water view villa then was to provide one-touch operation for all systems to make the home as efficient as possible.

La Scala worked to carefully define what rooms were “hidden” and how the room structure was laid out. The team programmed all daily living requests to quick actions which allow the client to easily live off of the first page of controls. The three main Macro’s in the house are Day, Night and House Off, as identified on the front entry and master bedroom control keypads. They are all identical unto the systems in which they communicate but each have a different variation level for music, lighting, and shades. On average, three uses of this system save the homeowner 50 minutes per day compared to an all-manual solution.

La Scala said, “If the homeowner can roll-out of the door to bridge club eight minutes early because the automation rolled up her two dozen large window shades and shut down all 112 centralize lighting loads with a button press, then our performance objective was achieved!” CEDIA’s judges couldn’t have agreed more and called this home “an innovative solution for an ‘older person.’”
